Entity relationship model

Super Admin owns the academy. Accountant is a separate finance role. Coaches are assigned per session and can be moved. Coaches mark their own attendance and student attendance.

Rules the diagram is enforcing

1. Super Admin is the root

Creates and owns Coaches and Students. Assigns an Accountant. Does not sit inside the bill workflow — that is handed to the Accountant. Super Admin still owns the academy graph: batches, sessions, assignments.

2. Accountant is a separate finance lane

Super Admin can assign only an Accountant to manage bills. Accountant sees Bill (amount, due date, status) linked to Student. Accountant cannot assign coaches, open sessions, or mark attendance. Fees stay off the ops path except as a status the coach can see (Fee Due).

3. Then come Coaches and Students

Both are people records under Super Admin. Students enroll in a Batch (Enrollment). Coaches are not locked to a batch — they are attached to Sessions.

4. Coach assignment is per session, and it can change

Batch has many Sessions (e.g. Weekend Evening on 6 Sep 3:30–5:00). Session Assignment links Coach to Session. The same coach can be moved to a different session of the same or another batch. Super Admin changes the assignment. Do not store coach_id only on Batch — that would freeze staff for every date.

5. Coaches mark two attendances on the same session

Coach Attendance: the coach marks themselves present or absent for that session (self). Student Attendance: the same coach marks the student list for that session (marked_by_coach_id). Two tables, same session_id. Do not merge them into one attendance row without a role flag.

Cardinality snapshot

Super Admin 1 — 0..1 Accountant Super Admin 1 — N Coach / Student / Batch
Accountant 1 — N Bill Student 1 — N Bill
Batch 1 — N Session Student N — N Batch (Enrollment)
Session N — N Coach (Session Assignment, changeable) Session 1 — N Coach Attendance / Student Attendance

Workflows A–C · Super Admin setup

These run before the coach app is used. Super Admin owns people and structure. Accountant is assigned here and stays in finance only.

A. Super Admin creates the academy graph

Actor: Super Admin

Pages: Admin web (not in knma pack) · feeds pages 1, 4, 7

Entities: Super Admin, Batch, Coach, Student

1. Create academy / sports / batches (Summer Camp, Weekend Evening…)
2. Add coaches and students under Super Admin
3. Enroll each student into one or more batches
4. Home, Classes, and Students now have data to show

B. Super Admin assigns Accountant (bills only)

Actor: Super Admin → Accountant

Pages: Admin web · result seen on page 14 as Fee Due

Entities: Super Admin, Accountant, Bill, Student

1. Super Admin assigns one Accountant — this role is separate
2. Accountant creates / tracks bills on the student (amount, due, status)
3. Accountant cannot assign coaches, open sessions, or mark attendance
4. Coach later sees Fee Due on the session roster (page 14) — read-only

C. Super Admin assigns coaches to sessions (changeable)

Actor: Super Admin

Pages: Pages 2, 3, 9, 11, 12 · coach counts 5 / 9

Entities: Super Admin, Coach, Batch, Session, Session Assignment

1. Create sessions for a batch (date + start + end)
2. Assign one or more coaches to THAT session, not to the whole batch
3. Move a coach to another session of the same or another batch
4. Home / Mark Coach Attendance shows the current coach count for the slot

Workflows D–F · Daily coach loop (Home + Classes)

Pages 1–5, 13, 16. Home is the command centre. Classes is the timetable. Same session object in both.

D. Home — daily hub and Check-in

Actor: Coach

Pages: Pages 1, 2

Entities: Coach, Session, Coach Attendance, Student

1. Open Home: academy name, date, “4 Sessions today”, Check-in
2. Read own month rings (Days / Attended / Missed) — Profile attendance
3. Search students, or tap an upcoming class card (View Students)
4. Pink Check-in is the fast path to mark self present for the current slot

E. My Classes — timetable of sessions

Actor: Coach

Pages: Pages 4, 5, 13

Entities: Batch, Session, Enrollment, Student

1. Open Classes tab — same Upcoming / Ongoing / Previous shell
2. Each card: date, time, batch name, student count, View Students
3. Toggle list view vs report view (pages 4 vs 5) — same data, two layouts
4. Page 13 adds student avatars on the card; drill-down is still the session roster

F. Date-range filter (shared shell)

Actor: Coach

Pages: Page 16 · also used on Classes, Matches, Coach Attendance

Entities: Session, Match

1. Tap the date chip (06 Sep 2026 – 15 Sep 2026)
2. Calendar modal: pick a range, Reset or Submit
3. Classes / Matches / Coach Attendance all reload for that window
4. Do not invent a second date picker — this is the shared filter

Workflows G–I · Students and both attendances

Pages 7, 12, 14. Students is the directory. Attendance is always scoped to one session.

G. My Students — directory by batch (not by time)

Actor: Coach (roster owned by Super Admin)

Pages: Page 7

Entities: Student, Batch, Enrollment

1. Open Students tab — Total Students 143
2. See batches: Summer Camp 17, Weekday Eve 4, Weekend Eve 15, Weekend Morning 107
3. Days of week only (Sun Sat) — no 3:30–5:00 time. This is the group, not a slot
4. Tap a batch to see the full enrolled roster. Same batch names as on Classes cards

H. Mark student attendance + Fee Due

Actor: Coach marks students · Accountant owns the bill

Pages: Page 14

Entities: Session, Student, Student Attendance, Bill

1. From a session card: View Students / Mark Attendance (06 Sep 3:30–5:00, 15 students)
2. Search the roster. Each row: avatar, name, Fee Due badge (from Accountant's Bill)
3. Coach marks present / absent. Writes Student Attendance (marked_by_coach_id)
4. Fee Due is a label on the door — coach does not edit bills

I. Mark coach attendance (self + staff on the slot)

Actor: Coach (self) · Super Admin can also mark the staff list

Pages: Pages 3, 9, 11, 12

Entities: Session, Coach, Session Assignment, Coach Attendance

1. Home strip or page 12: sessions with coach count (5 / 9) and View Coaches
2. Open the slot — list is Session Assignment, not the student roster
3. Each assigned coach marks SELF present / absent (Coach Attendance)
4. Assignment can be changed later; next session can have a different coach set

Workflows J–L · Profile, Matches, and the full loop

Pages 2, 6, 8, 10, 15. Profile is coach HR. Matches is the competitive twin of Classes.

J. Profile — coach HR (information, attendance, leaves)

Actor: Coach

Pages: Pages 6, 8, 10

Entities: Coach, Coach Attendance

1. Open Profile: photo, name, academy, Logout, Edit Profile
2. My Information: name, DOB, gender, mobile, emergency, email, certifications, experience, address
3. My Attendance / My Leaves — same record as Home rings and Check-in
4. Save / Discard. This identity is the actor on every attendance mark

K. Matches — fixtures using the Classes shell

Actor: Coach or Super Admin

Pages: Pages 2, 15

Entities: Match (sibling of Session), Batch, Student

1. Home Matches strip or Matches tab: Upcoming / Ongoing / Previous + date chip
2. Empty state today: No Matches! + Create New Match
3. Create a fixture in the same time language as a training session
4. Build as a sibling of Classes — do not invent a new page pattern

L. End-to-end academy loop (who does what)

Actor: Super Admin → Accountant → Coach → Student record

Pages: All pages 1–16

Entities: Every entity on page 1

1. Super Admin: batches, people, session coaches (changeable)
2. Accountant: bills only — Fee Due appears on page 14
3. Coach: Home → Classes/Students → mark SELF + Students → optional Match
4. Student never logs this coach app; they are the roster and the bill target
